Rhododendron Mrs. E. C. Stirling

Azaleas

It is best to give young Azaleas protection from wind and sun the first winter to prevent the bark from cracking. This can be done by building frames 1 foot high around the beds and shade with lath or other material. Also it is well to hold up on fertilizers after July and not water much after Sept. 1. This acts to harden off the wood, making them much hardier against severe cold weather.
